2. SST Introduction

1 The chapters 1 to 7 of this document is based upon the Eurosmart Site Security Target Template [1] with adaptions such that it fits the site (i.e. development site, testing of software, no production, no direct delivery to customers of the user of the site).

This Site Security Target is intended to be used by NXP Semiconductors Business Unit Identification (BU S&C).

* Note that the site of this Site Security Target also belong to NXP BU S&C.

2.1 SST Reference

- 2 Title Site Security Target Lite NXP Livingston
- 3 Version 1.0

2.2 Site Reference

4 The site belongs to NXP Semiconductors U.K. and is located at:

Almondvale Business Park, Almondvale Way, Livingston, EH54 6GA, UNITED KINGDOM

2.3 Site Description

- 5 The site as described in section 2.2 is on the 1st floor of a multiple occupancy building with a dedicate NXP security controlled area.
- This development area is RS (Restricted Security) and exclusively occupied by NXP with restricted need to know access controlled by NXP for authorize personnel only.
- 7 The non-NXP controlled areas of this building are out with the scope of this site security target (SST). All these areas of this building are considered to be out with the scope, security area and are describe later in this document.
- 8 Within the development area, only members of the development team are entitled to access sensitive information i.e. source code, confidential documentation, etc.
- 9 The activities are: Security IC Embedded Software Development (Phase 1), IC Embedded Software and Testing (Phase 1), IC Dedicated Software and Testing

NXP Semiconductors	Site Security Towns Lit	4. NVD	Released
Product Creation	Site Security Target Lite	NAP	05/03/2018
BU Security and Connectivity	Livingston		Page 6 of 37
Doc. Identifier: NXPOMS-1719007347-2710a		ld System Identifie	er: PV3-00191

(Phase 1) as defined in 'Security IC Platform Protection Profile' (PP-0035) and 'Security IC Platform Protection Profile with Augmentation Packages' (PP-0084)

- 10 To perform these activities the site uses the NXP BU S&C provided and managed remote IT-infrastructure. Locally available IT equipment like workstations or VPN routers are also provided and managed by NXP BU S&C directly. The site works according to NXP BU S&C processes.
- 11 The activities (and areas where they are performed) are:

Activity	Area
Development and testing* of software for secure	NXP Secure Area
integrated circuits.	
Engineering Test of Software development	NXP Secure Area

- The typical Life Cycle model for Smart Cards usually comprises the following phases:
 - Development,
 - Production,
 - Delivery,
 - Preparation,
 - Operation,
- Whereas the site under evaluation supports only the life cycle phase
 - Development

Owner: Alasdair Murray

Author: Gordon Caffrey

Development comprises of the generation of source code modules and the test of this code only.

3. Conformance Claim

- 15 This SST is conformant with Common Criteria Version 3.1:
- Common Criteria for Information Technology Security Evaluation, Part 1: Introduction and General Model; Version 3.1, Revision 4, September 2012, [2]
- Common Criteria for information Technology Security Evaluation, Part 3: Security Assurance Requirements; Version 3.1, 4, September 2012, [3]
- 16 For the evaluation, the following methodology will be used:
- Common Methodology for Information Security Evaluation (CEM), Evaluation Methodology; Version 3.1, 4, September 2012, [4]
- Minimum Site Security Requirement V2.1 [10]
- 17 This SST is CC Part 3 conformant.
- 18 There are no extended components required for this SST for the NXP Livingston Site.
- 19 The evaluation of the site comprises the following assurance components²:
 - ALC CMC.5,
 - ALC_CMS.5,
 - ALC_DVS.2,
 - ALC_LCD.1,
 - ALC_TAT.3.

Owner: Alasdair Murray

Author: Gordon Caffrey

- 20 The assurance level chosen for the SST is compliant to the Security IC Platform Protection Profile [5] and is therefore suitable for the evaluation of software and Hardware design for Security ICs.
- 21 The chosen assurance components are derived from the assurance level EAL6 of the assurance class "Life-cycle Support". For the assessment of the security measures attackers with a high attack potential are assumed. Therefore this site supports potentially augmented product evaluations up to EAL6.

4. Security Problem Definition

- 22 The Security Problem Definition comprises security problems derived from threats against the assets handled by the site.
- 23 Where necessary the items in this section have been re-worked to fit the site

4.1 Assets

24 The following section describes the assets handled at the site.

Development data: The site has access to (and optionally copies thereof) electronic development data (specifications, guidance documentation, source code, etc.) in relation to developed TOEs. Both the integrity and the confidentiality of these electronic documents must be protected.

Development tools: To perform its development activities the site uses tools (e.g. compiler) to transform source code (and potentially the libraries that come with these tools) into binaries. The integrity of these tools (running on local or remote development computers) must be protected.

Physical security objects: The site has physical security objects (printed documents, etc.) in relation to developed TOEs. Both the integrity and the confidentiality of these must be protected.

4.2 Threats

T.Smart-Theft: An attacker tries to access sensitive areas of the site for manipulation or theft of assets

- (1) In this case development data with the intention to violate confidentiality and possibly integrity
- (2) Physical security objects in the form of printed documentation
- (3) Development Tools in the form of IT infrastructure hardware.

The attacker has sufficient time to investigate the site outside the controlled boundary. For the attack the use of standard equipment for burglary is considered.

T.Rugged-Theft: An attacker with specialized equipment for burglary, who may be paid to perform the attack, tries to access sensitive areas and manipulate or steal assets (1) In this case development data with

NXP Semiconductors	Site Security Target Lite	NVD	Released	
Product Creation	Site Security Target Lite	NAP	05/03/2018	
BU Security and Connectivity	Livingston		Page 9 of 37	
Doc. Identifier: NXPOMS-1719007347-2710a		ld System Identifie	er: PV3-00191	

the intention to violate confidentiality and possibly integrity (2) Physical security objects in the form of printed documentation (3) Development Tools in the form of IT infrastructure hardware.

T.Computer-Net:

A possibly paid hacker with substantial expertise using standard equipment attempts to remotely access sensitive network segments to get access to (1) development data with the intention to violate confidentiality and possibly integrity or (2) development computers with the intention to modify the development process.

T.Unauthorised-Staff: Employees or subcontractors not authorized to get access to assets by violating (1) In this case development data with the intention to violate confidentiality and possibly integrity (2) Physical security objects in the form of printed documentation (3) Development Tools in the form of IT infrastructure hardware.

T.Staff-Collusion:

An attacker tries to get access to assets by getting support from one employee through extortion or bribery. (1) In this case development data with the intention to violate confidentiality and possibly integrity (2) Physical security objects in the form of printed documentation (3) Development Tools in the form of IT infrastructure hardware.

•

4.3 Organizational Security Policies

P.Config IT-env: The site uses software on development workstations and servers

in addition to configuration management systems for file versioning and problem tracking. For file versioning unique repositories shall be used to support proper management of multiple products and the site internal procedures and helps meet the objective of (O.Config_IT-env). The team members are instructed to use only project related IT equipment provided by

NXP with the provided tools.

P.LifeCycle-Doc: The site uses life cycle documentation that describes:

- (1) Description of configuration management systems and their usage;
- (2) A configuration items list;
- (3) Site security;
- (4) The development process;
- (5) The development tools.

These help meet the objective of O.Lifecycle-Doc

NXP Semiconductors	Site Security Toward Lite	NVD	Released
Product Creation	Site Security Target Lite	NAP	05/03/2018
BU Security and Connectivity	Livingston		Page 10 of 37
Doc. Identifier: NXPOMS-17190	07347-2710a O	ld System Identifie	er: PV3-00191

P.Config Activities: The activities of the site shall be performed in accordance with the life cycle documentation (P.Config IT-env) and helps meet the objective of (O.Network-separation) using the ITenvironment (O.Config_Activities).

4.4 **Assumptions**

A.Inherit-secure-IT: The local IT equipment (e.g. workstations) is connected to a secure remote IT-Infrastructure through a secure (encrypted) network connection. The local workstations, the remote secure IT-infrastructure and the secure connection to it will satisfy all relevant ALC requirements and are provided and managed by NXP. The workstations are configured such that any assets are contained within encrypted containers.

A.Setup-Projects:

To enable that the site participates in the development of products NXP provides services to setup the necessary development computers (tools, user accounts, etc.) and configuration management systems (user accounts, repositories etc.).

A.Product-Setup:

The site participates in the development of products. To define the participation of the site in the development while maintaining quality, for each product NXP will manage the activities to be performed by the site, the specifications of the input for the site and the acceptance of the results by NXP.

5. Security Objectives

25 The Security Objectives are related to physical, technical, and organizational security measures, the configuration management as well as the internal shipment and/or the external delivery.

O.Config_IT-env: The site uses software on development workstations and servers

in addition to configuration management systems for file versioning and problem tracking. For file versioning unique repositories are used to support proper management of multiple

products and the site internal procedures.

O.LifeCycle-Doc: The site uses life cycle documentation that describes:

(1) Description of configuration management systems and their usage;

- (2) A configuration items list;
- (3) Site security;
- (4) The development process;
- (5) The development tools.
- (6) CM Plan

O.Config_Activities: The activities of the site are performed in accordance with the life cycle documentation (O.Config_IT-env) using the IT-environment (O.LifeCycle-Doc).

O.Physical-Access: The combination of physical partitioning between the different access control levels together with technical and organisational security measures allows a sufficient separation of employees to enforce the "need to know" principle. The access control shall support the limitation for the access to these areas including the identification and rejection of unauthorised people. The access control measures ensure that only registered employees can access restricted areas. Assets are handled in restricted areas

only.

O.Security-Control: Assigned personnel of the site operate the systems for access control. Out of hour surveillance and respond to alarms is contracted to a 3rd party security company. Technical security measures like motion sensors and similar kind of sensors support the enforcement of the access control. NXP personnel are also responsible for registering and ensuring escort of visitors, contractors and suppliers.

O.Alarm-Response: The technical and organisational security measures ensure that an alarm is generated before an unauthorised person gets access to any asset. After the alarm is triggered the unauthorised

NXP Semiconductors	Site Security Toward Lite	Re	
Product Creation	Site Security Target Lite	NAP	05/03/2018
BU Security and Connectivity	Livingston		Page 12 of 37
Doc. Identifier: NXPOMS-1719007347-2710a		ld System Identifie	er: PV3-00191

person still has to overcome further security measures. The reaction time of the employees and/or guards is short enough to prevent a successful attack.

Owner: Alasdair Murray

Author: Gordon Caffrey

O.Internal-Monitor: The site performs security management meetings at least every six months. The security management meetings are used to review security incidences, to verify that maintenance measures are applied and to reconsider the assessment of risks and security measures. Furthermore, an internal audit is performed every year to control the application of the security measures.

- O.Maintain-Security: Technical security measures are maintained regularly to ensure correct operation. The logging of sensitive systems is checked regularly. This comprises the access control system to ensure that only authorised employees have access to sensitive areas as well as computer/network systems to ensure that they are configured as required to ensure the protection of the networks and computer systems.
- O.Network-separation: The (plain-text) development network of the site exists within the secured areas of the site only. It is connected only to:
 - (1) The encryption equipment employs encrypted VPNs to the secure network provided by the NXP;
 - (2) The development workstations provided by the NXP;
 - (3) Additional equipment (e.g. a printer) approved by the NXP.
- O.Logical-Operation: Development computers enforce that every user authenticates using a password and has a unique user ID.
- O.Control-Scrap: The site has measures in place to either securely destroy assets (e.g. paper shredder) or return them to the NXP for destruction.
- O.Staff-Engagement: All employees who have access to assets are checked regarding security concerns and have to sign a non-disclosure agreement. Furthermore, all employees are trained and qualified for their job. All contractors and visitors must be escorted by a trained employee at all times.

5.1 Security Objectives Rationale

- 26 The SST includes a Security Objective Rationale with two parts. The first part includes the tracing which shows how the threats and OSPs are covered by the Security Objectives. The second part includes a justification that shows that all threats and OSPs are effectively addressed by the Security Objectives (see column "Rationale" of table 1 and Table 2)
- 27 Note that the assumptions of the SST cannot be used to cover any threat or OSP of the site. They are seen as pre-conditions fulfilled either by the site providing the sensitive configuration items or by the site receiving the sensitive configuration items. Therefore, they do not contribute to the security of the site under evaluation.

Threat and OSP	Security Objective(s)	Rationale
T.Smart-Theft	O.Lifecycle-Doc O.Physical-Access O.Control-Scrap O.Security-Control O.Alarm-Response O.Internal-Monitor O.Maintain-Security O.Config_Activities	O.Lifecycle-Doc ensure that procedures are documented which assist in preventing Theft. O.Physical-Access ensures that the Secure Room is physically partitioned off, so that a burglar cannot just walk in. O.Control-Scrap ensures that scrap material cannot be accessed by an authorized party O.Security-Control ensures that an attacker will be detected when trying to reach the assets through the Secure Room O.Alarm-Response supports O.Physical_Access and O.Security_Control by ensuring that a response will be given to the alarm systems and that this response is quick enough to prevent access to the assets. O.Internal-Monitor and O.Maintain-Security ensure that the above is managed and maintained. O.Config_Activities activities of the site are performed in accordance with the life cycle documentation. Together, these objectives will therefore counter T.Smart_Theft

7. **Security Assurance Requirements**

- 29 NXP Livingston using this Site Security Target requires a TOE evaluation up to evaluation assurance level EAL6, potentially claiming conformance with the Eurosmart Protection Profile [5].
- 30 The Security Assurance Requirements are chosen from the class ALC (Lifecycle support) as defined in [3]:
- CM capabilities (ALC_CMC.5)
- CM scope (ALC_CMS.5)
- Development Security (ALC_DVS.2)
- Life-cycle definition (ALC LCD.1)
- Tools and techniques (ALC TAT.3)
- 31 Because hierarchically higher components are used in this SST the Security Assurance Requirements listed above fulfil the requirements of:
- [10] 'Minimum Site Security Requirements'
- [5] Eurosmart Protection Profile.
- 32 In addition, SAR as defined in [10] 'Minimum Site Security Requirements' is augmented by assurance components from 'Life-cycle definition' (ALC_LCD.1) and 'Tools and techniques' (ALC TAT.3).

7.1 **Application Notes and Refinements**

33 The description of the site certification process [6] includes specific application notes. The main item is that a product that is considered as intended TOE is not available during the evaluation. Since the term "TOE" is not applicable in the Site Security Target, the associated processes for the handling of products, or "intended TOEs" are in the scope of this Site Security Target and are described in this document. These processes are subject of the evaluation of the site.

7.1.1 CM Capabilities (ALC_CMC.5)

34 Refer to subsection 'Application Notes for Site Certification' in [6] 5.1 'Application Notes for ALC CMC'.

7.1.2 CM Scope (ALC CMS.5)

35 Refer to subsection 'Application Notes for Site Certification' in [6] 5.2 'Application Notes for ALC_CMS'.

7.1.3 **Development Security (ALC_DVS.2)**

36 Refer to subsection 'Application Notes for Site Certification' in [6] 5.4 'Application Notes for ALC DVS'.

Doc. Identifier: NXPOMS-17190	07347-2710a OI	ld System Identifie	er: PV3-00191

7.1.4 Life-cycle Definition (ALC_LCD.1)

- 37 Refer to subsection 'Application Notes for Site Certification' in [6] 5.6 'Application Notes for ALC LCD'.
- 38 Refer to 'Application Note 26' in 6.2.1.2 'Refinements regarding Development Security (ALC_DVS)' in the Eurosmart PP [5].
- 39 Refer to subsection *'Refinement'* in 6.2.1.2 'Refinements regarding Development Security (ALC_DVS)' in the Eurosmart PP [5].
- 40 Refer to subsection "C Excerpts from the Criteria in Security assurance components (chapter 7)" in [12] Security IC Platform Protection Profile (BSI-CC-PP-0084-2014), Version 1.0, Eurosmart, 2014.

7.1.5 Tools and Techniques (ALC_TAT.3)

41 Refer to subsection 'Application Notes for Site Certification' in [6] 5.7 'Application Notes for ALC_TAT'.

7.2 Security Requirements Rationale

7.2.1 Security Requirements Rationale - Dependencies

- 42 The dependencies for the assurance requirements are as follows:
- ALC_CMC.5: ALC_CMS.1, ALC_DVS.2, ALC_LCD.1
- ALC CMS.5: None
- ALC DVS.2: None
- ALC_LCD.1: None
- ALC_TAT.3: ADV_IMP.1
- 43 Some of the dependencies are not (completely) fulfilled:
- ALC_LCD.1 is only partially fulfilled as the site does not represent the entire development environment. This is in-line with and further explained in [6] 5.1 'Application Notes for ALC_CMC'.
- ADV_IMP.1 is not fulfilled as there is no specific TOE. This is in-line with and further explained in [6] 5.7 'Application Notes for ALC TAT'.

7.2.2 Security Requirements Rationale – Mapping

S	AR	Security Objective	Rationale

8. Site Summary Specification

8.1 Preconditions required by the Site

- 44 The site activities are performed using an IT infrastructure consisting of development workstations, servers and configuration management systems. All of these are provided, configured and maintained by the NXP.
- 45 The IT infrastructure consists of local and remote equipment connected using an encrypted connection. NXP provides, configures and maintains the local workstations and router (used for the encrypted connection) and all remote equipment such that they are secure. The workstations are configured such that any assets are contained within encrypted containers.
- 46 In case of necessary updates to the life cycle documentation NXP will coordinate, communicate and deliver.
- 47 To enable that the site participates in the development and test of products NXP provides services to setup the necessary development computers (tools, user accounts, etc.) and configuration management systems (user accounts, repositories etc.).
- 48 To enable the site to realize shipment such that assurance of integrity is assured throughout transport of physical security objects NXP will manage the shipment method.
- 49 In case the site is unable to securely destroy certain physical assets the assets will be securely stored and shipped to NXP Head office Hamburg for destruction.
- 50 To define the participation of the site in the development while maintaining quality, for each product NXP will manage the activities to be performed, the specifications of the input for the site and the acceptance of the results.
- 51 The site follows the development processes of NXP. Applicable policies and processes are documented and available.

8.2 Services of the Site

Owner: Alasdair Murray

Author: Gordon Caffrey

52 The site participates in the development and test of software for secure integrated circuits.

8.3 Security Assurance Rationale

8.3.1 CM capabilities (ALC CMC.5)

53 For full detail and evidences please view Section 7.2.2

8.3.2 CM scope (ALC_CMS.5)

54 For full detail and evidences please view Section 7.2.2

8.3.3 Development Security (ALC_DVS.2)

55 For full detail and evidences please view Section 7.2.2

8.3.4 Life-cycle definition (ALC_LCD.1)

56 For full detail and evidences please view Section 7.2.2

8.3.5 Tools and techniques (ALC_TAT.3)

57 For full detail and evidences please view Section 7.2.2

8.4 Objectives Rationale

The following rationale provides a justification that shows that all threats and OSP are effectively addressed by the Security Objectives.

8.4.1 O.Physical-Access

Owner: Alasdair Murray

Author: Gordon Caffrey

59 The NXP Office area is surrounded by a solid wall construction and controlled by Access Control and CCTV. The access to the building is only possible via access reception desk and controlled doors. NXP manages its own dedicated alarm system and the additional external control are graduated according to the running operation at the site. The physical, technical and organizational security measures ensure a separation of the site into three security levels. The access control ensures that only registered persons can access sensitive areas. This

NXP Semiconductors	Site Security Target Lite	NVD	Released
Product Creation	Site Security Target Lite	NAP	05/03/2018
BU Security and Connectivity	Livingston		Page 32 of 37
Doc. Identifier: NXPOMS-17190	07347-2710a O	ld System Identifie	er: PV3-00191

is supported by O.Security-Control that includes the maintenance of the access control and the control of visitors. The physical security measures are supported by O.Alarm-Response providing an alarm system.

60 Thereby the threats T.Smart-Theft, T.Rugged-Theft can be prevented. The physical security measures together with the security measure provided by O.Security-Control enforce the recording of all actions. Thereby also T.Computer-Net, T.Staff-Collusion and T.Unauthorized-Staff is addressed. Also addresses the OSP P.Config-Activities.

8.4.2 O.Security-Control

- 61 During off hours the alarm system is monitored with a dedicated off site monitoring station. The CCTV system supports these measures because it is always enabled. Further on the security control is supported by O.Physical-Access requiring different level of access control for the access to security product during operation as well as during off-hours.
- 62 This addresses the threats T.Smart-Theft and T.Rugged-Theft. Supported by O.Maintain- Security and O.Physical-Access also an internal attacker triggers the security measures implemented by O.Security-Control. Therefore also the Threat T.Unauthorized-Staff is addressed.

8.4.3 O.Alarm-Response

- 63 During working hours the employees monitor the alarm system. The alarm system is connected to a control center that is manned 24 hours. During off-hours additional guard patrol supports the alarm system. O.Physical-Access requires certain time to overcome the different level of access control. The response time of the guard and the physical resistance match to provide an effective alarm response.
- 64 This addresses the threats T.Smart-Theft, T.Rugged-Theft and T.Unauthorised-Staff

8.4.4 O.Internal-Monitor

Owner: Alasdair Murray

Author: Gordon Caffrey

- 65 Regular security management meetings are implemented to monitor security incidences as well as changes or updates of security relevant systems and processes. This comprises of all security events, security relevant systems, CCTV and access control. Major changes of security systems and security procedures are reviewed in general management systems review meetings (4x per year). Upon introduction of a new process a formal review and release for mass production is made before being generally introduced.
- 66 The security relevant systems enforcing or supporting O.Physical-Access, O.Security-Control and O.Logical-Access are checked and maintained regularly by the suppliers. In addition the configuration is updated as required

NXP Semiconductors	Site Security Toward Lite	NVD	Released
Product Creation	Site Security Target Lite NXP Livingston		05/03/2018
BU Security and Connectivity			Page 33 of 37
Doc. Identifier: NXPOMS-17190	07347-2710a O	ld System Identifie	er: PV3-00191

either by employees (for the access control system) of the supplier. Logging files are checked at least monthly for technical problems and specific maintenance requests

67 This addresses T.Smart-Theft, T.Rugged-Theft, T.Computer-Net, T.Unauthorised-Staff and T.Staff-Collusion

8.4.5 O.Maintain-Security

- 68 The security relevant systems enforcing or supporting O.Physical-Access, O.Security-Control and O.Logical-Access are checked and maintained regularly by the suppliers. In addition the configuration is updated as required either by employees (for the access control system) of the supplier. Logging files are checked at least monthly for technical problems and specific maintenance requests.
- These security measures are necessary to prevent the threats T.Smart-Theft, T.Rugged-Theft, T.Computer-Net, T.Unautorised-Staff and T.Staff-Collusion

70

8.4.6 O.Logical-Operation

- 71 All logical protection measures are maintained and updated as required, at least once a month. Critical items such as virus scanners are updated daily. The backup is sufficiently protected and is only accessible for the administration.
- 72 This addresses the threats T.Computer-Net and T.Unauthorised-Staff

8.4.7 O.Staff-Engagement

- 73 All employees are interviewed before hiring. They must sign an NDA and a code of conduct for the use of NXP equipment before they start working in the company. The formal training and qualification includes security relevant subjects and the principles of handling and storage of security products. The security objectives O.Physical-Access, O.Logical- Access and O.Config-Items support the engagement of the staff.
- 74 This addresses the threats T.Computer-Net, T.Staff-Collusion and T.Unauthorised-Staff

8.4.8 O.Control-Scrap

Owner: Alasdair Murray

Author: Gordon Caffrey

75 Scarp may only exist in two forms on this site printed secure objects or redundant hardware/movable media. Hardware scrap is returned to NXP head office for controlled secure destruction. Transport and actual destruction of security products is done under supervision of a qualified employee in

NXP Semiconductors	Site Security Toward Lite	NVD	Released
Product Creation	Site Security Target Lite	NAP	05/03/2018
BU Security and Connectivity	Livingston		Page 34 of 37
		ld System Identifie	er: PV3-00191

collaboration with the destructor. Sensitive information and information storage media are collected internally in a safe location and destructed in a supervised and documented process. All documentation destroyed on site is by means of a Level 5 security shredder.

76 Supported by O.Physical-Access and O.Staff-engagement this addresses the threats T.Unauthorised-Staff, T.Computer-Net, T.Smart-Theft, T.Rugged-Theft and T.Staff-Collusion

8.4.9 O.Config_Activities

- 77 All product configuration information is stored in the database on the NXP secure network. The information stored is covering process specifications, acceptance test instructions and specifications, and test programs. Products are identified by unique customer part IDs with are linked to the unique ID numbers of the associated configuration items.
- 78 This is addressing the threat T.Rugged-Theft, T.Computer-Net, T.Staff-Collusion, T.Unauthorised-Staff, T.Smart-Theft and the OSP P.Config-Activities

79

8.4.10 O.Config_IT-env

- 80 The configuration of the IT environment is designed in such way to ensure segregation of duties and the need to know principals.
- 81 These measures address T.Computer-Net, T.Staff-Collusion and T.Unauthorized-Staff. Also addresses the OSP P.Config-IT-env.

8.4.11 O.Network_Separation

- 82 The internal network is separated from the internet with a firewall. The internal network is further separated into subnetworks by internal firewalls. These firewalls allow only authorized information exchange between the internal subnetworks. Each user is logging into the system with his personalised user name and password. The objective is supported by O.Internal-Monitor based on the checks of the logging regarding security relevant events.
- 83 The individual accounts are addressing T.Computer-Net. All network configuration is stored in the database of the NXP secure network. Supported by O.Config-IT-env this addresses the threats T.Unauthorised-Staff and the OSP P.Config-Activity.

8.4.12 O.LifeCycle_doc

- 84 The security of the site is maintained according to the sites security documentation covering all physical and logical measures to ensure the security of the site.
- 85 These security measures are necessary to prevent the threats T.Smart-Theft, T.Rugged-Theft, T.Computer-Net, T.Unautorised-Staff and T.Staff-Collusion. Also addressing the OSP P.Lifecycle-Doc
