# Warning

This report is designed to provide sponsors with a document enabling them to assess the security level of a product under the conditions of use and operation defined in this report for the evaluated version. It is also designed to provide the potential purchaser of the product with the conditions under which he may operate or use the product so as to meet the conditions of use for which the product has been evaluated and certified; that is why this certification report must be read alongside the evaluated user and administration guidance, as well as with the product security target, which presents threats, environmental assumptions and the supposed conditions of use so that the user can judge for himself whether the product meets his needs in terms of security objectives.

Certification does not, however, constitute a recommendation product from DCSSI (Central Directorate for Information Systems Security), and does not guarantee that the certified product is totally free of all exploitable vulnerabilities.

Any correspondence about this report has to be addressed to:

Secrétariat Général de la Défense Nationale
Direction Centrale de la Sécurité des Systèmes d'Information

The product is recognised at EAL4 level.

Security Certified

#### Introduction

#### The Certification

Security certification for information technology products and systems is governed by decree number 2002-535 dated April, 18th 2002, and published in the "Journal Officiel de la République Française". This decree stipulates that:

- The central information system security department draws up **certification reports**. These reports indicate the features of the proposed security targets. They may include any warnings that the authors feel the need to mention for security reasons. They may or may not be transmitted to third parties or made public, as the principals desire (article 7).
- The **certificates** issued by the Prime Minister certify that the copies of the products or systems submitted for evaluation fulfil the specified security features. They also certify that the evaluations have been carried out in compliance with applicable rules and standards, with the required degrees of skill and impartiality (article 8).

The procedures are available on the Internet site www.ssi.gouv.fr.

# 1. The product

#### 1.1. Presentation of the product

The evaluated product is the smart card ASEPcos-CNS/CIE, consisting of the AT90SC144144CT rev. G microcontroller with its software library Toolbox version: 00.03.01.04, developed by ATMEL Secure Products Division, and embedding the software "ASEPcos" with Digital Signature Application "CNS/CIE", developed by Athena Smartcard Solutions. The reference of the software embedded in flash memory is "ASEPcos-CNS/CIE version 1.60 Build 001".

The product is a smart card is to be used as a secure signature-creation device (SSCD) of type 3.

#### 1.2. Evaluated product description

The security target [ST] defines the evaluated product, its evaluated security functionalities and its operation environment.

This security target is compliant to "Secure Signature-Creation Device Type 3" protection profile (Cf. [SSCD3]).

#### 1.2.1. Product identification

The configuration list [CONF] identifies the product's constituent elements.

The certified version of the product can be identified by several elements, using the "Get Data" command, among which:

- The operating system ASEPcos with Digital Signature Application "CNS/CIE", version 1.60 Build 001, identified by:
  - o Operating system identifier;
  - Operating system version number;
  - o Operating system build number.
- The microcontroller: AT90SC144144CT rev. G
  - o IC version;
  - o IC serial number;
  - Cryptographic library (toolbox) version.

The assigned values for these identifiers are defined in the user and administrator guidance (Cf. [GUIDES]).

#### 1.2.2. Security services

The ASEPcos-CNS/CIE product enforces the security functions required for digital signature and supports usage only through secure trusted communication channels. The application implements a Secure Signature Creation Device (SSCD) which allows the generation of signature creation data (SCD) and of signature verification data (SVD) and the creation of

Page 6 out 16 CER/F/07.5

qualified electronic signatures. The TOE protects the SCD and ensures that only an authorized Signatory can use it.

#### 1.2.3. Architecture

The product is a smartcard that consists of:

- The microcontroller "AT90SC144144CT rev. G" with its software cryptographic library;
- The ASEPcos operating system;
- The application related to digital signature;
- Other command outside the scope of the evaluation.

The architecture of the product is summarised in the following picture:

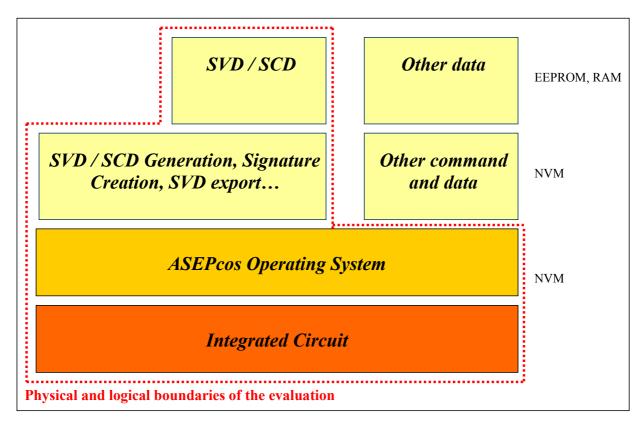

Figure 1 – Architecture of the product

#### 1.2.4. Life cycle

The product's life cycle is organised as follow:

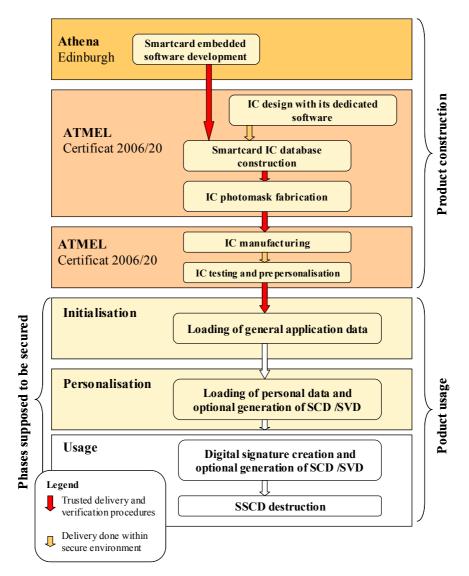

Figure 2 – Life cycle of the product

The embedded software was developed on the following site:

#### **Athena Smartcard Solutions**

Regus House, 10 Lochside Place, Edinburgh Park, Edinburgh, EH12 9RG, Scotland, United Kingdom

The microcontroller and its cryptographic software library were developed by Atmel Secure Products Division:

#### **Atmel Secure Products Division**

Maxwell Building, Scottish Enterprise technology Park, East Kilbride Glasgow G75 0QR, Scotland, United Kingdom

Page 8 out 16 CER/F/07.5

#### 1.2.5. Evaluated configuration

The certificate applies to the following functionalities:

- Access Control,
- Identification and Authentication,
- Signature Creation,
- Secure Messaging,
- Crypto,
- Protection.

With regard to the life cycle, the evaluated product is the product that comes out the manufacturing, test and pre-personalization phase.

#### 2. The evaluation

#### 2.1. Evaluation referential

The evaluation has been performed in compliance with **Common Criteria version 2.3** [CC] and with the Common Evaluation Methodology [CEM].

For assurance components above EAL4 level, the evaluation facility own evaluation methods consistent with [AIS 34], validated by DCSSI have been used.

In order to meet the specificities of smart cards, the [CC IC] and [CC AP] guides have been applied.

#### 2.2. Evaluation work

The evaluation has been performed according to the composition scheme as defined in the guide [COMP] in order to assess that no weakness is introduced from the integration of the software in the microcontroller already certified.

Therefore, the results of the evaluation of the microcontroller "AT90SC144144CT rev. G" at EAL4 level augmented with ADV\_IMP.2, ALC\_DVS.2, AVA\_MSU.3 and AVA\_VLA.4, compliant with the [PP/9806] protection profile, have been used. This microcontroller has been certified the 16<sup>th</sup> of November 2006 under the reference 2006/20 (Cf. 2006/20]).

The evaluation technical report [ETR], delivered to DCSSI the 24<sup>th</sup> of October 2007, provides details on the work performed by the evaluation facility and assesses that all evaluation tasks are "**pass**".

#### 2.3. Cryptographic mechanisms robustness analysis

The robustness of cryptographic mechanisms has not been analysed by DCSSI.

Page 10 out 16 CER/F/07.5

#### 3. Certification

#### 3.1. Conclusion

The evaluation was carried out according to the current rules and standards, with the required competency and impartiality by a licensed evaluation facility. All the work performed permits the release of a certificate in conformance with the decree 2002-535.

This certificate testifies that the product "Card ASEPcos-CNS/CIE: AT90SC144144CT microcontroller embedding the software ASEPcos-CNS/CIE with Digital Signature Application" submitted for evaluation fulfils the security features specified in its security target [ST] for the evaluation level EAL4 augmented.

#### 3.2. Restrictions

This certificate only applies on the product specified in chapter 1.2 of this certification report.

The user of the certified product shall respect the operational environmental security objectives summarized specified in the security target [ST] and shall respect the recommendations in the guidance [GUIDES].

Security objectives for the environment that are defined in the PP SSCD type 3 [SSCD3] have to be taken into account for a secure usage and are related to the following aspects:

- The generation of qualified certificates (OE.CGA\_Qcert);
- The verification of the SVD authenticity by the CGA (OE.SVD Auth CGA);
- The VAD protection (OE.HI VAD);
- The data to be signed (OE.SCA Data Intend).

#### 3.3. Recognition of the certificate

#### 3.3.1. European recognition (SOG-IS)

This certificate is issued in accordance with the provisions of the SOG-IS agreement [SOG-IS].

The European Recognition Agreement made by SOG-IS in 1999 allows recognition from Signatory States of the agreement<sup>1</sup>, of ITSEC and Common Criteria certificates. The European recognition is applicable up to ITSEC E6 and CC EAL7 levels. The certificates that are recognized in the agreement scope are released with the following marking:

<sup>1</sup> The signatory countries of the SOG-IS agreement are: Finland, France, Germany, Greece, Italy, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

#### 3.3.2. International common criteria recognition (CCRA)

This certificate is released in accordance with the provisions of the CCRA [CC RA].

The Common Criteria Recognition Arrangement allows the recognition, by signatory countries<sup>1</sup>, of the Common Criteria certificates. The mutual recognition is applicable up to the assurance components of CC EAL4 level and also to ALC\_FLR family. The certificates that are recognized in the agreement scope are released with the following marking:

Page 12 out 16 CER/F/07.5

<sup>1</sup> The signatory countries of the CCRA arrangement are: Australia, Austria, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, India, Israel, Italy, Japan, The Netherlands, New-Zealand, Norway, Singapore, Spain, Sweden, Turkey, United Kingdom and United States.
